

To whom it may concern,

Sky.Com of Topeka performed all the low-voltage wiring for our new conference room and updated all the low-voltage wiring for our entire office. They did this ahead of schedule and beat the deadline necessary for the other subcontractors to complete their jobs on their scheduled times. This remodel took place January 2015 at our corporate office in Topeka Kansas.

We hired Sky.Com to do our low-voltage wiring for this project because of the great experience we had with them in past jobs would have helped us out with low-voltage runs. They understand the urgency and importance of projects and always above our expectations.

We were very pleased at the projects end knowing everything was properly installed and ready for our IT staff.

Sky.com, Inc. will always be our low voltage contractor of choice in future projects. They have the knowledge, skill and competence to complete the job on time and with the highest.

Respectfully,

*Mark McCabe
